

Innovative Single-Source Solutions for your Fabrication Needs

Sapa Extrusions – Mountain Top has extensive experience with many diverse product applications in markets that include transportation, military and defense, automotive, pneumatic cylinders, automation, fluid power, renewable energy, solar power, lighting, displays, linear actuators, electronics, building and construction, customer durables and medical equipment.

New product development services:

- Extrusion and fabrication concept development
- Expert engineering design assistance
- Customer partnerships
- Metallurgical and Microscopic Analysis available upon request

Fabrication

Sapa Extrusions provides the **operational and project support** you need for any scale of fabrication.

Designed for efficiency, Sapa's in-house fabrication facilities can take an aluminum extrusion and miter cut, cut-to-length, drill and mill it to the required customer specifications. We have been very successful with fabrication customers because our complete in-house capabilities, technical services and close coordination assure that each project is completed economically and with the utmost quality.

FABRICATION

With Sapa, customers find an expert in the value stream with our fully integrated extrusion, painting, anodizing, fabrication and technical services. Our project managers continually coordinate the extrusion, fabrication and finishing operations to streamline each project. Our single-source capabilities also mean a shorter lead time for our customers and on-time delivery that corresponds to their schedule.

Sapa's full fabrication operations and capabilities at a glance

- Close tolerance, straight, single and double mitered cutting
- 21 state-of-the-art CNC high speed machining centers with bed lengths up to 4.5 meters
- Dedicated, custom design fabrication centers (Xpress Machine)
- Three fabrication plants to resource dependent upon application US and Canada
- Finished tolerances as tight as +/- .005"

Supported by these value-added services:

- Extrusions... wide product range including multi-void hollow
- Finishes... painting, anodizing, bright dip and glass bead texturing
- Individual manufacturing development cells
- Rapid prototyping with confidentiality
- Close tolerance machine capabilities
- One-stop shop with full service, turnkey capabilities... engineering concepts to finished consumer product
- Quick turnaround
- Short run availability
- Full tooling capabilities

Sapa's Mountain Top facility supplies this precision bumper extrusion for the revolutionary Chevrolet Volt, named MOTOR TREND'S Car of the Year.
