

Sapa Fabrication is Focused On You

Sapa Industrial Extrusions offers full capabilities for fabricated components... not only a profile, but a **complete solution for a customer's needs**. Our facilities for fabrication, finishing, assembly and custom packaging are organized around the specific requirements of every individual order. **The customer is the center of our value-added services.**

From extrusions that require basic procedures (such as cutting or punching) to fully finished components and assemblies, we provide a completely finished solution, ready to ship to the user or insert into their production line. With Sapa, customers build expertise into their value stream, reduce lead time and assure on-time delivery for their scheduling needs.

Friction Stir Welding uses a rotary dowel to join pieces with minimal influence on the material's properties. The joints are strong, homogeneous and porous-free.

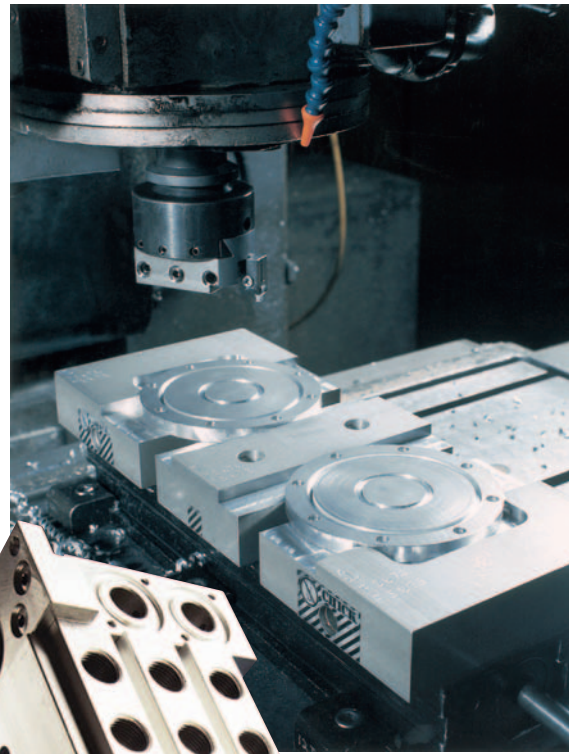

How Can Fabrication Work For You?

Sapa Industrial Extrusions has the answers. Our engineering, manufacturing and application specialists work with you to lower your production costs and improve product design. This one-stop shopping **is available from a single source**, with operations and project support to assure utmost quality and economical cost. We emphasize partnering with customers to develop solutions to their needs. We will help you develop your idea into a finished product.

Sapa's value-added fabrication services include:

- Precision Cutting
- Drilling and Tapping
- Punching
- Forming
- Deburring
- Beveling / Chamfering
- CNC Machining
- Assembly and Packaging
- Conventional Welding
- Friction Stir Welding
- In addition to our in-house services, we have outside partners to provide Painting, Anodizing, Stretch and Roll Forming and more.

Contact us by phone, fax or email for information, quotes... and watch your solutions take shape.
