

## SAPA HEAT TRANSFER

### Energy policy

Sapa Heat Transfer AB shall be the leading supplier of heat transfer solutions in aluminium. We use energy mainly in the form of electricity and propane. Energy efficiency is an important part of our company's continued success and the energy management system is a tool for a structured approach to achieve our goals.

#### We at Sapa Heat Transfer:

- comply with or surpass relevant legislation and regulations and other requirements to which the organisation subscribes.
- evaluate new technologies and new findings with regard to energy and resource efficiency at changes.
- take the life cycle cost into account when deciding on changes as well as purchasing and procurement. Efforts are determined by what is technically feasible, economically reasonable and justified in terms of energy.
- mapping the energy use and demonstrate energy efficiency by measuring.
- improve energy efficiency continuously by setting clear goals.
- visualise interesting indicators that makes each individual employee feel they can influence.
- internally communicate the importance of energy efficiency.
- influence our suppliers to operate in accordance with our policy.

#### All employees contribute by:

- being involved and taking responsibility for energy issues at the workplace and also at company level.
- reporting energy deficiencies.
