Stand C24**

Your visit to the L&B Fair

Of course we would like to speak to you in person. We are pleased to make this possible at the fair! To make sure we have enough time for each other, you can already indicate when you would like to visit our stand.

Would you like to make an appointment with us? Please click the image below.

To receive Shape magazine, please click the image above.

February 2010

Sapa Pole Products has passed the 18m NE3 crash test (EN 12767)

The crash test, which took place on the 17th of November 2009 at TTAI in Helmond (The Netherlands), was a huge success. A lighting column of 18m with a shear off solution was tested on the two mandatory speeds. The column passed both the high speed of 100 km/h and the low speed of 35 km/h. The lighting column included a double bracket, two lanterns, and an LPDE protector.

Certified

Having passed the official crash test, the 18m 100NE3 lighting columns are now **fully certified**. The current NE3 passively safe family has been extended from 15m to 18m.
